### BIOLOGICAL ACTIVITY

#### Description

Naphthoquine phosphate is a potent and orally active antimalarial agent. Naphthoquine phosphate has thorough killing function for various schizonts of plasmodia, including resistance of *P. falciparum* to Chloroquine<sup>[1][2]</sup>.

#### In Vivo

The monkeys (Treated with Plasmodium knowlesi) are treated i.g. once daily for 3 days with 6 or 10 mg/kg of Naphthoquine phosphate respectively. At 24 h after Naphthoquine phosphate administration, the parasite reduction rate is higher than 90%<sup>[2]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
