

Agomelatine hydrochloride

Cat. No.:	HY-17038A
CAS No.:	1176316-99-6
Molecular Formula:	C ₁₅ H ₁₈ ClNO ₂
Molecular Weight:	279.76
Target:	5-HT Receptor; Melatonin Receptor; Endogenous Metabolite
Pathway:	GPCR/G Protein; Neuronal Signaling; Metabolic Enzyme/Protease
Storage:	4°C, sealed storage, away from moisture * In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture)

HCl

SOLVENT & SOLUBILITY

In Vitro

DMSO : ≥ 100 mg/mL (357.45 mM)
 H₂O : < 0.1 mg/mL (insoluble)
 * "≥" means soluble, but saturation unknown.

Preparing Stock Solutions	Solvent Concentration	Mass		
		1 mg	5 mg	10 mg
	1 mM	3.5745 mL	17.8725 mL	35.7449 mL
	5 mM	0.7149 mL	3.5745 mL	7.1490 mL
	10 mM	0.3574 mL	1.7872 mL	3.5745 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
Solubility: ≥ 2.5 mg/mL (8.94 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)
Solubility: ≥ 2.5 mg/mL (8.94 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil
Solubility: ≥ 2.5 mg/mL (8.94 mM); Clear solution

BIOLOGICAL ACTIVITY

Description

Agomelatine hydrochloride (S-20098 hydrochloride) is a specific agonist of MT1 and MT2 receptors with K_is of 0.1, 0.06, 0.12, and 0.27 nM for CHO-hMT1, HEK-hMT1, CHO-hMT2, and HEK-hMT2, respectively^[1]. Agomelatine hydrochloride is a selective 5-HT_{2C} receptor antagonist with pK_is of 6.4 and 6.2 at native (porcine) and cloned, human 5-HT_{2C} receptors, respectively^[2].

IC₅₀ & Target

5-HT _{2C} Receptor 6.4 (pK _i , native porcine)	5-HT _{2C} Receptor 6.2 (pK _i , human)	hMT1 0.1 (K _i , CHO Cells)	hMT1 0.06 (K _i , HEK Cells)
---	--	--	---

	hMT2 0.12 (Ki, CHO Cells)	hMT2 0.27 (Ki, HEK Cells)								
In Vitro	<p>Agomelatine (S 20098) acts as a full agonist of MT1 and MT2 receptors with EC₅₀s of 1.6±0.4, 0.10±0.04 nM for CHO hMT1 CHO-hMT2 (hMT1 and hMT2 receptors expressed in CHO or HEK cell membranes)^[1].</p> <p>Agomelatine (S20098) also interacts with h5-HT2B receptors (6.6), whereas it shows low affinity at native (rat)/cloned, human 5-HT2A (<5.0/5.3) and 5-HT1A (<5.0/5.2) receptors, and negligible (<5.0) affinity for other 5-HT receptors^[2].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>									
In Vivo	<p>Agomelatine (25, 50, or 75 mg/kg; i.p.) has antioxidant activity in Strychnine (75 mg/kg, i.p.) or Pilocarpine (400 mg/kg, i.p.) induced seizure models in mice. Agomelatine dose not have any antioxidant effects on parameters of oxidative stress produced by Pentylene-tetrazole (PTZ) or Picrotoxin (PTX) induced seizure models when compared to controls^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <table border="1"> <tr> <td>Animal Model:</td> <td>Female Swiss mice (20-30 g) were administered PTZ (85 mg/kg, i.p.), PTX (7 mg/kg, i.p.), strychnine (75 mg/kg, i.p.), Pilocarpine (400 mg/kg, i.p.), respectively^[3]</td> </tr> <tr> <td>Dosage:</td> <td>25, 50, or 75 mg/kg</td> </tr> <tr> <td>Administration:</td> <td>Administered intraperitoneally (i.p.)</td> </tr> <tr> <td>Result:</td> <td> <p>All dosages showed a significant decrease in thiobarbituric acid reactive substances (TBARS) levels and nitrite content in all brain areas when compared to controls in the Pilocarpine induced seizure model.</p> <p>All dosages decreased TBARS levels in all brain areas, and at low doses (25 or 50 mg/kg) decreased nitrite contents, but only at 25 or 50 mg/kg showed a significant increase in catalase activity in three brain areas when compared to controls in the Strychnine-induced seizure model.</p> <p>Did not have any antioxidant effects on parameters of oxidative stress produced by PTX- or PTZ-induced seizure models when compared to controls.</p> </td> </tr> </table>		Animal Model:	Female Swiss mice (20-30 g) were administered PTZ (85 mg/kg, i.p.), PTX (7 mg/kg, i.p.), strychnine (75 mg/kg, i.p.), Pilocarpine (400 mg/kg, i.p.), respectively ^[3]	Dosage:	25, 50, or 75 mg/kg	Administration:	Administered intraperitoneally (i.p.)
