BIOLOGICAL ACTIVITY

Description	Emtricitabine- ¹³ C, ¹⁵ N ₂ (BW1592- ¹³ C, ¹⁵ N ₂) is a ¹³ C- and ¹⁵ N-labeled Emtricitabine (HY-17427). Emtricitabine is a nucleoside reverse transcriptase inhibitor (NRTI) with an EC ₅₀ of 0.01 μM in PBMC cell. It is an antiviral agent for the treatment of HIV infection.
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
