Pantoprazole sodium hydrate

Cat. No.: HY-17507B

CAS No.: 164579-32-2

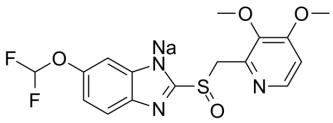
Molecular Formula: $C_{16}H_{17}F_2N_3NaO_{5.5}S$

Molecular Weight: 432.37

Target: Proton Pump; Autophagy; Apoptosis

Pathway: Membrane Transporter/Ion Channel; Autophagy; Apoptosis

Storage: 4°C, sealed storage, away from moisture and light
* In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture and light)



$1.5H_2O$

SOLVENT & SOLUBILITY

In Vitro

H_2O : 250 mg/mL (578.21 mM; Need ultrasonic)
DMSO : 100 mg/mL (231.28 mM; Need ultrasonic)

Preparing Stock Solutions	Solvent / Mass / Concentration	1 mg	5 mg	10 mg
	1 mM	2.3128 mL	11.5642 mL	23.1283 mL
	5 mM	0.4626 mL	2.3128 mL	4.6257 mL
	10 mM	0.2313 mL	1.1564 mL	2.3128 mL

Please refer to the solubility information to select the appropriate solvent.

In Vivo

1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline
   Solubility: ≥ 2.5 mg/mL (5.78 mM); Clear solution
2. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)
   Solubility: ≥ 2.5 mg/mL (5.78 mM); Clear solution
3. Add each solvent one by one: 10% DMSO >> 90% corn oil
   Solubility: ≥ 2.5 mg/mL (5.78 mM); Clear solution

BIOLOGICAL ACTIVITY

Description

Pantoprazole sodium hydrate (BY10232 sodium hydrate) is an orally active and potent proton pump inhibitor (PPI)[1]. Pantoprazole sodium hydrate, a substituted benzimidazole, is a potent H^+/K^+-ATPase inhibitor with an IC_{50} of 6.8 μM. Pantoprazole sodium hydrate improves pH stability and has anti-secretory, anti-ulcer activities. Pantoprazole sodium hydrate significantly increased tumor growth delay combined with Doxorubicin (HY-15142)[3][4].

In Vitro

Pantoprazole sodium hydrate (BY1023 sodium hydrate; 1-10000 μM) leads to concentration-dependent increases in endosomal pH in EMT-6 and MCF7 cells[1].

	Pantoprazole sodium hydrate can block exosome release. Pantoprazole sodium hydrate inhibits the activity of V-H^+-ATPase and impaires the ability of tumour cells (melanomas, adenocarcinomas, and lymphoma cell lines) to acidify the extracellular medium[2] MCE has not independently confirmed the accuracy of these methods. They are for reference only.
In Vivo	Pantoprazole sodium hydrate (BY1023 sodium hydrate; 200 mg/kg; IP; once a week for 3 weeks) significantly increases tumor growth delay of MCF-7 xenografts combined with Doxorubicin[1]. Pantoprazole sodium hydrate (0.3-3 mg/kg, p.o.) dose-dependently decreases both basal acid secretion in pylorus-ligated rats and the stimulated acid secretion induced by mepirizole in acute fistula rats[4]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Mice bearing MCF-7 or A431 xenografts[1]
Dosage:	200 mg/kg
Administration:	IP; once a week for 3 weeks; alone or 2 hours before Doxorubicin (6 mg/kg i.v.)
Result:	Showed even greater growth delay of MCF-7 xenografts with Doxorubicin compared with the single-dose combination. Significantly increased tumor growth delay with a single dose with Doxorubicin. There is no effect on growth delay alone.
