Meclofenoxate hydrochloride

Cat. No.: HY-17555
CAS No.: 3685-84-5
Molecular Formula: C₁₂H₁₇Cl₂NO₃
Molecular Weight: 294.17
Target: nAChR; iGluR
Pathway: Membrane Transporter/Ion Channel; Neuronal Signaling
Storage: Powder
-20°C 3 years
4°C 2 years
In solvent
-80°C 6 months
-20°C 1 month

SOLVENT & SOLUBILITY

In Vitro
DMSO : ≥ 50 mg/mL (169.97 mM)
H₂O : 33.33 mg/mL (113.30 mM; Need ultrasonic)

“≥” means soluble, but saturation unknown.

BIOLOGICAL ACTIVITY

Description
Meclofenoxate hydrochloride, an ester of dimethylethanolamine (DMAE) and 4-chlorophenoxyacetic acid (pCPA), has been shown to improve memory, have a mentally stimulating effect, and improve general cognition. IC₅₀ value:
Target: nootropic
Meclofenoxate, administered in a dose of 50 mg/kg twice daily for 7 days using the maze-training method, increased the number of responses to the conditioned stimulus, when retention tests were made 24 hours and 7 days after training, whereas citicholine, applied in the same way in a dose of 10 mg/kg, shortened the latency of the responses with reinforcement during the training and increased the number of correct responses to the conditioned stimulus in retention tests 7 days after the training [1]. Meclofenoxate appears to increase the consolidation of new information into long-term memory, but does not affect other aspects of remembering [2].
