Daprodustat

Cat. No.: HY-17608
CAS No.: 960539-70-2
Molecular Formula: C₁₉H₂₇N₃O₆
Molecular Weight: 393.43
Target: HIF/HIF Prolyl-Hydroxylase
Pathway: Metabolic Enzyme/Protease
Storage: Powder
-20°C 3 years
4°C 2 years
In solvent
-80°C 6 months
-20°C 1 month

Please refer to the solubility information to select the appropriate solvent.

BIOLOGICAL ACTIVITY

Description: Daprodustat is an orally active hypoxia-inducible factor prolyl hydroxylase inhibitor being developed for treatment of anemia associated with chronic kidney disease.

In Vitro: GSK1278863 is an orally administered small-molecule PHI, and stimulates endogenous EPO synthesis and induce effective erythropoiesis[1]. GSK1278863 has been shown to increase erythropoietin levels, leading to increases in hemoglobin, hematocrit and red blood cell numbers[2].
