BIOLOGICAL ACTIVITY

Description

SB-612111 hydrochloride hydrochloride is a novel and potent opiate receptor-like orphan receptor (ORL-1) antagonist with a high affinity for hORL-1 (K_i=0.33 nM). SB-612111 hydrochloride exhibits selectivity for μ-, κ- and δ-receptors with K_i values of 57.6 nM, 160.5 nM and 2109 nM, respecticely. SB-612111 hydrochloride effectively antagonizes the pronociceptive action of Nociceptin (HY-P0183) in an acute pain model[1].

In Vivo

SB-612111 hydrochloride (intravenous injection; 0.6-10 nmol/mouse) antagonize nociceptin-induced thermal hyperalgesia in a dose-dependent manner with an ED_{50} of 0.62 mg/kg[1].
SB-612111 hydrochloride (intravenous injection; 0.1-5 mg/kg) causes a significant inhibition of the carrageenan-induced reduction in paw withdrawal latencies in rat, however, untreated paw are uneffected[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Male rats[1]
Dosage:	0.1 mg/kg, 0.3 mg/kg, 1 mg/kg, 3 mg/kg, 5 mg/kg
Administration:	Intravenous injection; single dose
Result:	Had antihyperalgesic effects on carrageenan-induced rat paw.
