BIOLOGICAL ACTIVITY

Description
GSK2795039 is a NADPH oxidase 2 (NOX2) inhibitor with a mean pIC\(_{50}\) of 6 in different cell-free assays. GSK2795039 inhibits reactive oxygen species (ROS) production and NADPH consumption\(^1\). GSK2795039 reduces apoptosis\(^2\).

IC\(_{50}\) & Target
NOX2
In Vitro

GSK2795039 (25 μM; 24 hours) reduces the combinatorial effect of FeSO4 and LPS-increased levels of apoptosis and reduced the presence of caspase-3-positive PC12 cells\(^2\).

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

In Vivo

GSK2795039 (intraperitoneal injection; 100 mg/kg; 1 hour before) decreases activity in a murine model of acute pancreatitis, reducing the levels of serum amylase triggered by systemic injection of cerulein\(^1\).

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

**Animal Model:**

| C57BL6 mice\(^1\) |

**Dosage:**

| 100 mg/kg |

**Administration:**

| Intraperitoneal injection; 100 mg/kg; 1 hour before |

**Result:**

| Caused 50% reduction in the level of serum amylase activity. |
