## BIOLOGICAL ACTIVITY

### Description

FK706 is a potent, slow-binding and competitive inhibitor of human neutrophil elastase with an IC<sub>50</sub> of 83 nM and a K<sub>i</sub> of 4.2 nM. FK706 also inhibits mouse neutrophil elastase and porcine pancreatic elastase with IC<sub>50</sub>s of 22 nM and 100 nM, respectively, and has no inhibitory activity against other serine proteinases such as human pancreatic trypsin, human pancreatic α-chymotrypsin and human leukocyte cathepsin G. FK706 has anti-inflammatory effect<sup>[1][2]</sup>.

### IC<sub>50</sub> & Target

IC<sub>50</sub>: 83 nM (Human neutrophil elastase), 22 nM (Mouse neutrophil elastase) and 100 nM (Porcine pancreatic elastase)<sup>[1]</sup>;  
 K<sub>i</sub>: 4.2 nM (Human neutrophil elastase)<sup>[1]</sup>

<p><b>In Vitro</b></p>	<p>FK706 effectively inhibits the hydrolysis of bovine neck ligament elastin (2 mg/mL final concentration) by human neutrophil elastase (4 µg/mL final concentration) with an IC50 value of 230 nM<sup>[1]</sup>.            FK706 blocks the release of inflammatory chemokines, suppresses the expression of IL-8 and MCP-1 mRNA, and suppresses NF-κB activation. It seems possible that FK706 may directly blocks human lung fibroblasts activation of NF-κB, preventing expression of inflammatory chemokines during cigarette smoke-induced lung inflammation<sup>[2]</sup>. <p><b>In Vivo</b></p>	<p>FK706 (10-100 mg/kg; subcutaneous injection; for 1-6 hours; male C57BL mice) treatment significantly suppresses human neutrophil elastase (20 µg/paw)-induced paw edema in mice in a dose-dependent manner (47% inhibition at a dose of 100 mg/kg)<sup>[1]</sup>.
