BMS-1

Cat. No.: HY-19991
CAS No.: 1675201-83-8
Molecular Formula: C₂₉H₃₃NO₅
Molecular Weight: 475.58
Target: PD-1/PD-L1
Pathway: Immunology/Inflammation
Storage: Powder
-20°C 3 years
4°C 2 years
In solvent
-80°C 6 months
-20°C 1 month

SOLVENT & SOLUBILITY

In Vitro DMSO : ≥ 29 mg/mL (60.98 mM)
≥” means soluble, but saturation unknown.

BIOLOGICAL ACTIVITY

Description BMS-1 is an inhibitor of the PD-1/PD-L1 protein/protein interaction (IC₅₀ between 6 and 100 nM)[1][2].

IC₅₀ & Target PD1-PDL1[1]

In Vitro Since PD-1 mediated the exhaustion of natural killer (NK) cell by binding to its ligand PD-L1, BMS-1 (PD-1/PD-L1 inhibitor 1) (1 μM, 3 days) is used to disturb the interaction between PD-1 and PD-L1. Dexamethasone induced increase of PD-1 expression and decrease of cytotoxicity of the co-cultured NK92 cells are reversed by BMS-1[1]. BMS-1, a small-molecule immune checkpoint inhibitor of PD-1/PD-L1, can be used as a therapeutic strategy for tumor immunotherapy[2].

Cell Cytotoxicity Assay[1]

Cell Line: NK cells and HepG2 cells
Concentration: 1 μM
Incubation Time: 3 days
Result: Disturbed the interaction between PD-1 and PD-L1.

In Vivo

BMS-1 (500 μg/mL; 100 μL; i.p.) significantly slows down tumor growth and prolongs the survival rates in BALB/c mice

Animal Model: BALB/c mice
Dosage: 500 μg/mL; 100 μL
Administration: I.p.
Result: Administration significantly slowed down tumor growth and prolonged the survival rates.
