

AT9283

Cat. No.:	HY-50514
CAS No.:	896466-04-9
Molecular Formula:	C ₁₉ H ₂₃ N ₇ O ₂
Molecular Weight:	381.43
Target:	JAK; Aurora Kinase; Bcr-Abl; FLT3; Apoptosis; Autophagy
Pathway:	Epigenetics; JAK/STAT Signaling; Stem Cell/Wnt; Cell Cycle/DNA Damage; Protein Tyrosine Kinase/RTK; Apoptosis; Autophagy
Storage:	Powder -20°C 3 years 4°C 2 years In solvent -80°C 6 months -20°C 1 month

SOLVENT & SOLUBILITY

In Vitro	DMSO : ≥ 100 mg/mL (262.17 mM)			
	* "≥" means soluble, but saturation unknown.			
		Solvent Concentration	Mass	
	Preparing Stock Solutions		1 mg	5 mg
	1 mM	2.6217 mL	13.1086 mL	26.2171 mL
	5 mM	0.5243 mL	2.6217 mL	5.2434 mL
	10 mM	0.2622 mL	1.3109 mL	2.6217 mL
Please refer to the solubility information to select the appropriate solvent.				
In Vivo	1. Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (6.55 mM); Clear solution 2. Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (6.55 mM); Clear solution 3. Add each solvent one by one: 10% DMSO >> 90% corn oil Solubility: ≥ 2.5 mg/mL (6.55 mM); Clear solution			

BIOLOGICAL ACTIVITY

Description	AT9283 is a multi-targeted kinase inhibitor with potent activity against Aurora A/B, JAK2/3, Abl (T315I) and Flt3 (IC ₅₀ s ranging from 1 to 30 nM). AT9283 inhibits growth and survival of multiple solid tumors in vitro and in vivo ^{[1][2]} .			
IC₅₀ & Target	Aurora A 3 nM (IC ₅₀)	Aurora B 3 nM (IC ₅₀)	JAK3 1.1 nM (IC ₅₀)	JAK2 1.2 nM (IC ₅₀)

	ABL(T315I) 4 nM (IC ₅₀)	FIt-3
In Vitro	<p>AT9283 leads to a clear polyploid phenotype by inhibiting the activity of Aurora B kinase in HCT116 cells with IC₅₀ of 30 nM. Furthermore, AT9283 also produces the potent inhibition on HCT116 colony formation^[1].</p> <p>AT9283 induces apoptosis in a dose and time dependent manner and inhibits cell proliferation with an IC₅₀ < 1 μM in B-NHL cell lines^[2].</p> <p>AT9283 inhibits growth, induces dose dependent cytotoxicity, and inhibits STAT3 signaling pathway in MM cell lines. T9283 inhibits phospho Histone H3 and phospho Aurora A at Thr 288. AT9283 increases G2/M phase and induces apoptosis of MM cells in a time-dependent manner^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>	
In Vivo	<p>In HCT116 human colon carcinoma xenograft bearing mice, AT9283 treatment (15 mg/kg and 20 mg/kg) for 16 days results in a significant tumor growth inhibition of 67% and 76%, respectively. In addition, AT9283 also exhibits a significantly longer half-life in tumors (2.5 hours) compared with plasma (0.5 hour) and modest oral bioavailability in mice^[1].</p> <p>AT9283 (15 mg/kg) and docetaxel (10 mg/kg) alone has modest anti-tumor activity. T9283 at 20 mg/kg and AT9283 (15 or 20 mg/kg) plus docetaxel (10 mg/kg) demonstrate a statistically significant tumor growth inhibition and enhance survival in mouse xenograft model of mantle cell lymphoma^[2].</p> <p>AT9283 (45 mg/kg, i.p.) inhibits tumor growth in mice. Two cycles of AT9283 45 mg/kg 14 hours after drug administration confirm decreased expression of phospho-Histone H3 and Aurora B in treated animals^[3].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>	

PROTOCOL

Cell Assay ^[2]

Lymphoma cells are seeded at 8,000 per well in 96-well culture plates and allowed to grow for 24 hr followed by the desired treatment with increasing concentrations of the indicated agents for 4 days. Viable cell densities are determined using a CellTiter 96 Cell Proliferation Assay. The IC₅₀ values are estimated by CalcuSyn software.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Administration ^[2]

SCID mice are injected with 1×10^7 Granta-519 MCL cells subcutaneously into the right hind flank. When tumors reached a volume of approx 60-100 mm³, mice are divided randomly (pair-matched) into six test groups with 12 mice per cohort: control group (saline), AT9283 (15 mg/kg IP Q1D, 5 days a week × 3 weeks) group, AT9283 (20 mg/kg IP Q1D, 5 days a week × 3 weeks) group, docetaxel (10 mg/kg IV Q1W × 3 weeks) group, AT9283 (15 mg/kg IP Q1D, 5 days a week × 3 weeks) + docetaxel (10 mg/kg IV Q1W × 3 weeks) group and AT9283 (20 mg/kg IP Q1D, 5 days a week × 3 weeks) + docetaxel (10 mg/kg IV Q1W × 3 weeks) group. The length (L) and width (W) of the subcutaneous tumors are measured by calipers and the tumor volume (TV) is calculated as: $TV = (L \times W^2) / 2$. Mice are sacrificed at the end of study and overall survival for each cohort is analyzed by Kaplan-Meier method.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
