

## Acetaminophen-d<sub>3</sub>

<b>Cat. No.:</b>	HY-66005S1	
<b>CAS No.:</b>	60902-28-5	
<b>Molecular Formula:</b>	C <sub>8</sub> H <sub>6</sub> D <sub>3</sub> NO <sub>2</sub>	
<b>Molecular Weight:</b>	154.18	
<b>Target:</b>	COX; Histone Acetyltransferase; Endogenous Metabolite	
<b>Pathway:</b>	Immunology/Inflammation; Epigenetics; Metabolic Enzyme/Protease	
<b>Storage:</b>	Powder	-20°C 3 years
	In solvent	-80°C 6 months
		-20°C 1 month

### BIOLOGICAL ACTIVITY

<b>Description</b>	Acetaminophen-d <sub>3</sub> is the deuterium labeled Acetaminophen. Acetaminophen (Paracetamol) is a selective cyclooxygenase-2 (COX-2) inhibitor with an IC <sub>50</sub> of 25.8 μM; is a widely used antipyretic and analgesic agent[1][2][3]. Acetaminophen is a potent hepatic N-acetyltransferase 2 (NAT2) inhibitor[4].
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
