

Acetaminophen-¹³C₂,¹⁵N

Cat. No.:	HY-66005S4
CAS No.:	360769-21-7
Molecular Formula:	C ₆ ¹³ C ₂ H ₉ ¹⁵ NO ₂
Molecular Weight:	154.14
Target:	COX; Bacterial; Histone Acetyltransferase; Parasite; Endogenous Metabolite
Pathway:	Immunology/Inflammation; Anti-infection; Epigenetics; Metabolic Enzyme/Protease
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Acetaminophen- ¹³ C ₂ , ¹⁵ N is the ¹³ C and ¹⁵ N labeled Acetaminophen[1]. Acetaminophen (Paracetamol) is a selective cyclooxygenase-2 (COX-2) inhibitor with an IC50 of 25.8 μM; is a widely used antipyretic and analgesic agent[2][3][4]. Acetaminophen is a potent hepatic N-acetyltransferase 2 (NAT2) inhibitor[5].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
