

Carvedilol-d4

Cat. No.:	HY-B0006S1		
CAS No.:	1133705-56-2		
Molecular Formula:	C ₂₄ H ₂₂ D ₄ N ₂ O ₄		
Molecular Weight:	410.5		
Target:	Adrenergic Receptor; Autophagy		
Pathway:	GPCR/G Protein; Neuronal Signaling; Autophagy		
Storage:	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

BIOLOGICAL ACTIVITY

Description	Carvedilol-d4 (BM 14190-d4) is the deuterium labeled Carvedilol. Carvedilol (BM 14190) is a non-selective β/α -1 blocker ^[1] . Carvedilol inhibits lipid peroxidation in a dose-dependent manner with an IC ₅₀ of 5 μ M. Carvedilol is a multiple action antihypertensive agent with potential use in angina and congestive heart failure ^[2] . Carvedilol is an autophagy inducer that inhibits the NLRP3 inflammasome ^[3] .
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
