

## Adenosine-<sup>13</sup>C<sub>10</sub>

<b>Cat. No.:</b>	HY-B0228S13
<b>CAS No.:</b>	1887761-94-5
<b>Molecular Formula:</b>	<sup>13</sup> C <sub>10</sub> H <sub>13</sub> N <sub>5</sub> O <sub>4</sub>
<b>Molecular Weight:</b>	277.17
<b>Target:</b>	Isotope-Labeled Compounds; Nucleoside Antimetabolite/Analog; Endogenous Metabolite; Autophagy; Apoptosis
<b>Pathway:</b>	Others; Cell Cycle/DNA Damage; Metabolic Enzyme/Protease; Autophagy; Apoptosis
<b>Storage:</b>	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Adenosine- <sup>13</sup> C <sub>10</sub> (Adenine riboside- <sup>13</sup> C <sub>10</sub> ; D-Adenosine- <sup>13</sup> C <sub>10</sub> ) is <sup>13</sup> C-labeled Adenosine (HY-B0228). Adenosine (Adenine riboside), a ubiquitous endogenous autacoid, acts through the enrollment of four G protein-coupled receptors: A1, A2A, A2B, and A3. Adenosine affects almost all aspects of cellular physiology, including neuronal activity, vascular function, platelet aggregation, and blood cell regulation.
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
