Sulfamethoxazole

Cat. No.:	HY-B0322				
CAS No.:	723-46-6				
Molecular Formula:	C ₁₀ H ₁₁ N ₃ O ₃ S				
Molecular Weight:	253.28				
Target:	Bacterial; Antibiotic				
Pathway:	Anti-infection				
Storage:	Powder	-20°C	3 years		
		4°C	2 years		
	In solvent	-80°C	1 year		
		-20°C	6 months		

SOLVENT & SOLUBILITY

In Vitro	DMSO : ≥ 100 mg/mL (394.82 mM) H ₂ O : < 0.1 mg/mL (insoluble) * "≥" means soluble, but saturation unknown.						
		Solvent Mass Concentration	1 mg	5 mg	10 mg		
	Preparing Stock Solutions	1 mM	3.9482 mL	19.7410 mL	39.4820 mL		
		5 mM	0.7896 mL	3.9482 mL	7.8964 mL		
		10 mM	0.3948 mL	1.9741 mL	3.9482 mL		
	Please refer to the so	lubility information to select the app	propriate solvent.				
In Vivo	 Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline Solubility: ≥ 2.5 mg/mL (9.87 mM); Clear solution Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (9.87 mM); Clear solution 						

Description	Sulfamethoxazole (Ro 4-2130) is a sulfonamide bacteriostatic antibiotic, used for bacterial infections. Sulfonamides is a competitive antagonists of para-aminobenzoic acid (PABA) ^[1] .				
IC ₅₀ & Target	Antibacterial				
In Vitro	Sulfonamides are structural analogs and competitive antagonists of para-aminobenzoic acid (PABA). They inhibit normal bacterial utilization of PABA for the synthesis of folic acid, an important metabolite in DNA synthesis.? The effects seen are usually bacteriostatic in nature. Folic acid is not synthesized in humans, but is instead a dietary requirement. This allows for				

Product Data Sheet

the selective toxicity to bacterial cells (or any cell dependent on synthesizing folic acid) over human cells. Bacterial resistance to sulfamethoxazole is caused by mutations in the enzymes involved in folic acid synthesis that prevent the drug from binding to it.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
