

Xylometazoline-d₄ hydrochloride

Cat. No.:	HY-B0475S
Molecular Formula:	C ₁₆ H ₂₁ D ₄ ClN ₂
Molecular Weight:	284.86
Target:	Adrenergic Receptor; Isotope-Labeled Compounds
Pathway:	GPCR/G Protein; Neuronal Signaling; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Xylometazoline-d ₄ hydrochloride is deuterated labeled Xylometazoline hydrochloride (HY-B0475). Xylometazoline hydrochloride is an α -adrenergic receptor agonist ($K_i=0.05-1.7 \mu\text{M}$). Xylometazoline hydrochloride can constrict nasal blood vessels and increase nasal airflow. Xylometazoline hydrochloride can be used in nose stuffiness and runny nose research ^[1] [2].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
