

## Biotin

<b>Cat. No.:</b>	HY-B0511		
<b>CAS No.:</b>	58-85-5		
<b>Molecular Formula:</b>	C <sub>10</sub> H <sub>16</sub> N <sub>2</sub> O <sub>3</sub> S		
<b>Molecular Weight:</b>	244.31		
<b>Target:</b>	Endogenous Metabolite		
<b>Pathway:</b>	Metabolic Enzyme/Protease		
<b>Storage:</b>	Powder	-20°C	3 years
		4°C	2 years
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

<b>In Vitro</b>	DMSO : 100 mg/mL (409.32 mM; Need ultrasonic)				
		Solvent Concentration	Mass 1 mg	5 mg	10 mg
	<b>Preparing Stock Solutions</b>	1 mM	4.0932 mL	20.4658 mL	40.9316 mL
		5 mM	0.8186 mL	4.0932 mL	8.1863 mL
10 mM		0.4093 mL	2.0466 mL	4.0932 mL	
Please refer to the solubility information to select the appropriate solvent.					
<b>In Vivo</b>	<ol style="list-style-type: none"> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 40% PEG300 &gt;&gt; 5% Tween-80 &gt;&gt; 45% saline Solubility: ≥ 2.5 mg/mL (10.23 mM); Clear solution</li> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 90% (20% SBE-β-CD in saline) Solubility: ≥ 2.5 mg/mL (10.23 mM); Clear solution</li> <li>Add each solvent one by one: 10% DMSO &gt;&gt; 90% corn oil Solubility: ≥ 2.5 mg/mL (10.23 mM); Clear solution</li> <li>Add each solvent one by one: PBS Solubility: 1.96 mg/mL (8.02 mM); Clear solution; Need ultrasonic and warming and heat to 60°C</li> </ol>				

### BIOLOGICAL ACTIVITY

<b>Description</b>	Biotin, vitamin B7 and serves as a coenzyme for five carboxylases in humans, involved in the synthesis of fatty acids, isoleucine, and valine, and in gluconeogenesis. Biotin is necessary for cell growth, the production of fatty acids, and the metabolism of fats and amino acids <sup>[1][2][3]</sup> .	
<b>IC<sub>50</sub> &amp; Target</b>	Microbial Metabolite	Human Endogenous Metabolite

<b>In Vitro</b>	<p>Biotin exhibits higher affinity on breast cancer (T47D) cells over normal mammary epithelial (MCF-12A) cells, with <math>K_m</math>s of 9.24 <math>\mu</math>M and 53.1 <math>\mu</math>M, respectively<sup>[4]</sup>.</p> <p>Biotin (0.09-100 <math>\mu</math>M; 0-70 min) is dose-dependently uptake by T47D cells with <math>V_{max}</math> of 27.34 pmol/mg protein/min<sup>[4]</sup>.</p> <p>Biotin (1-1000 nM; 24 h) exerts function in the recovery of 7<math>\beta</math>-OHC (50 <math>\mu</math>M)-induced cell death and reduces cell adhesion<sup>[5]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p> <p>Cell Viability Assay<sup>[5]</sup></p>	
	Cell Line:	Murine oligodendrocyte 158N cells
	Concentration:	1, 10, 100, 1000 nM
	Incubation Time:	24 hours
	Result:	<p>Showed cytoprotective effects and prevents 7<math>\beta</math>-hydroxycholesterol-induced disruption of redox status.</p> <p>Improved attenuation of oxidative stress, mitochondrial dysfunction, lipid metabolism alteration.</p>
<b>In Vivo</b>	<p>Biotin (15 mg/kg/d; p.o.; 12 d) improves nephrotoxicity in streptozotocin-induced (150 mg/kg; i.p.) diabetic mice<sup>[6]</sup>.</p> <p>Biotin (0.012 mg/kg/d; p.o.; 70 d) deficiency impaires the immune function of the head kidney, spleen and skin in fish with inadequate administration dose<sup>[7]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>	
	Animal Model:	Streptozotocin-induced Diabetes type 1 in male Swiss albino mice (25 $\pm$ 2 g) <sup>[6]</sup>
	Dosage:	15 mg/kg/d
	Administration:	Oral gavage; 12 days
	Result:	Improved histopathological results, including distorted glomeruli, inflammatory cells, and giant macrophages, and diminished acroline reaction of oxidative damage.
	Animal Model:	Grass carp (117 $\pm$ 0.5 g) <sup>[7]</sup>
	Dosage:	0.012, 0.110, 0.214, 0.311, 0.427, and 0.518 mg/kg
	Administration:	Oral gavage; 70 days
	Result:	<p>Reduced the activities of lysozyme (LZ) and acid phosphatase (ACP), decreased the contents of complement 3 (C3), C4 and immunoglobulin M (IgM).</p> <p>Reduced the mRNA levels of anti-microbial substances.</p> <p>Increased the mRNA levels of pro-inflammatory cytokines, tumour necrosis factor partially and reduced anti-inflammatory IL-4/13A, IL-10, IL-11 and TGF-<math>\beta</math>1 mRNA levels partially in association with target of rapamycin (TOR) signaling.</p>
