

## Ciprofibrate

|                           |  |       |          |
|---------------------------|--|-------|----------|
| <b>Cat. No.:</b>          | HY-B0664   |       |          |
| <b>CAS No.:</b>           | 52214-84-3   |       |          |
| <b>Molecular Formula:</b> | C <sub>13</sub> H <sub>14</sub> Cl <sub>2</sub> O <sub>3</sub> |       |          |
| <b>Molecular Weight:</b>  | 289.15   |       |          |
| <b>Target:</b>            | PPAR   |       |          |
| <b>Pathway:</b>           | Cell Cycle/DNA Damage  |       |          |
| <b>Storage:</b>           | Powder   | -20°C | 3 years  |
|                           |  | 4°C   | 2 years  |
|                           | In solvent   | -80°C | 6 months |
|                           |  | -20°C | 1 month  |

### SOLVENT & SOLUBILITY

#### In Vitro

DMSO : ≥ 100 mg/mL (345.84 mM)  
 \* "≥" means soluble, but saturation unknown.

| Preparing Stock Solutions | Solvent Concentration | Mass      |            |            |
|---------------------------|-----------------------|-----------|------------|------------|
|                           |                       | 1 mg      | 5 mg       | 10 mg      |
|                           | 1 mM                  | 3.4584 mL | 17.2921 mL | 34.5841 mL |
|                           | 5 mM                  | 0.6917 mL | 3.4584 mL  | 6.9168 mL  |
|                           | 10 mM                 | 0.3458 mL | 1.7292 mL  | 3.4584 mL  |

Please refer to the solubility information to select the appropriate solvent.

#### In Vivo

- Add each solvent one by one: 10% DMSO >> 40% PEG300 >> 5% Tween-80 >> 45% saline  
 Solubility: ≥ 2.5 mg/mL (8.65 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% (20% SBE-β-CD in saline)  
 Solubility: ≥ 2.5 mg/mL (8.65 mM); Clear solution
- Add each solvent one by one: 10% DMSO >> 90% corn oil  
 Solubility: ≥ 2.5 mg/mL (8.65 mM); Clear solution

### BIOLOGICAL ACTIVITY

#### Description

Ciprofibrate (Win35833) is a potent peroxisome proliferator and increases the phosphorylation level of the PPARalpha<sup>[1]</sup>. Ciprofibrate acts as an orally active hypolipidaemic agent and can be used for the research of primary hyperlipidaemias<sup>[2]</sup>.

#### IC<sub>50</sub> & Target

PPARα

#### In Vitro

Ciprofibrate (500 μM; 4 hours) increases the PPARα phosphorylation level in rat Fao cells<sup>[1]</sup>.

In a LucLite assay, Ciprofibrate (10-100 $\mu$ M; 24 hours) induces PPARR activation by existing increased LUC activities in the rat liver H4IIEC3 cells transfected with PPRE-AB LUC reporter gene plasmid<sup>[2]</sup>.  
Ciprofibrate (10-100  $\mu$ M; 24 hours) is not cytotoxic for HepG2 cells, and the cell viability is 99.7%<sup>[3]</sup>.  
Ciprofibrate (100  $\mu$ M; 24 hours) also abolishes FFAs mixture-induced lipid deposition and decreases FFAs mixture-increased TG contents in HepG2 cells<sup>[3]</sup>.  
Ciprofibrate (100  $\mu$ M; 24 hours) almost entirely eliminates the FFAs mixture-induced inflammatory cytokines overproduction, including MCP-1, TNF- $\alpha$ , and IL-6 in HepG2 cells<sup>[3]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

#### In Vivo

Ciprofibrate (oral administration; 10 mg/kg/day; 3 days) does not result in any significant effects on body weight or absolute liver weight for MCD diet-fed mice. Ciprofibrate improves hepatic steatosis and reduced hepatic necro-inflammation in MCD diet-fed mice. It also reduced hepatic cytokine protein and mRNA levels (MCP-1, TNF $\alpha$  and IL-6) as compared to those of choline-deficient (MCD) diet-fed mice<sup>[3]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.

|                 |   |
|-----------------|---|
| Animal Model:   | C57BL/6 mice (six-week-old males) <sup>[3]</sup>                                      |
| Dosage:         | 10 mg/kg  |
| Administration: | Oral administration; 10 mg/kg/day; 3 days   |
| Result:         | Decreased MCD diet-resulted hepatic steatosis and hepatic necro-inflammation in mice. |
