

## Levocetirizine-d<sub>4</sub>

Cat. No.:	HY-B0814S1
CAS No.:	1133210-23-7
Molecular Formula:	C <sub>21</sub> H <sub>21</sub> D <sub>4</sub> ClN <sub>2</sub> O <sub>3</sub>
Molecular Weight:	392.91
Target:	Isotope-Labeled Compounds
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

<b>Description</b>	Levocetirizine-d <sub>4</sub> ((R)-Cetirizine-d <sub>4</sub> ) is the deuterium-labeled Levocetirizine (HY-B0814) <sup>[1]</sup> . Levocetirizine ((R)-Cetirizine) is a third-generation peripheral H <sub>1</sub> -receptor antagonist. Levocetirizine is an antihistaminic agent which is the R-enantiomer of Cetirizine. Levocetirizine has a higher affinity for the histamine H <sub>1</sub> -receptor than (S)-Cetirizine and can effectively treat allergic rhinitis and chronic idiopathic urticaria <sup>[2]</sup> .
<b>In Vitro</b>	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
