### BIOLOGICAL ACTIVITY

#### Description

Ambroxol (NA-872), an active metabolite of the proagent Bromhexine, has potent expectorant effects. Ambroxol is a glucocerebrosidase (GCCase) chaperone and increases glucocerebrosidase activity. Ambroxol induces lung autophagy and has the potential for Parkinson disease and neuronopathic Gaucher disease research<sup>[1][2]</sup>.

## In Vivo

Ambroxol (NA-872; 1, 3, 4, 5 mM for 12 consecutive days in drinking water) results in increased brain glucocerebrosidase activity in wild-type mice, transgenic mice expressing the heterozygous L444P mutation in the murine glucocerebrosidase 1 gene, and transgenic mice overexpressing human  $\alpha$ -synuclein<sup>[2]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
