Ramifenazone-d₇

Cat. No.:	HY-B1137S	
CAS No.:	1330180-51-2	
Molecular Formula:	C ₁₄ H ₁₂ D ₇ N ₃ O	
Molecular Weight:	252.36	
Target:	Bacterial; Isotope-Labeled Compounds	
Pathway:	Anti-infection; Others	
Storage:	Please store the product under the recommended conditions in the Certificate of	
	Analysis.	

Inhibitors

BIOLOGICAL ACTIVITY Description Ramifenazone-d₇ is the deuterium labeled Ramifenazone. Ramifenazone (Isopropylaminoantipyrine) is a pyrazole derivative and acts as a non-steroidal anti-inflammatory agent (NSAID). Ramifenazone has analgesic, antipyretic, anti-inflammatory and antimicrobial activities[1][2]. In Vitro Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs^[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.
