Proxyphylline

**Cat. No.:** HY-B1742  
**CAS No.:** 603-00-9  
**Molecular Formula:** C₁₀H₁₄N₄O₃  
**Molecular Weight:** 238.24  
**Target:** Adenosine Receptor  
**Pathway:** GPCR/G Protein

**Storage:**  
- **Powder:**  
  - -20°C: 3 years  
  - 4°C: 2 years  
- **In solvent:**  
  - -80°C: 6 months  
  - -20°C: 1 month

**BIOLOGICAL ACTIVITY**

**Description**  
Proxyphylline is a methylxanthine derivative clinical used as cardiac stimulant, vasodilator and bronchodilator.

**In Vitro**  
Proxyphylline has shown vasodilatory and cardiac stimulatory effects. Proxyphylline produces an increase in the coronary flow associated with a definite positive inotropic effect\(^1\). Proxyphylline inhibits tracheal PDE-activity and half-maximum relaxation of tracheal smooth muscle is obtained with 100 μg/mL proxyphylline\(^2\).

**In Vivo**  
In a double-blind cross-over study, proxyphylline exhibits bronchodilatory effect\(^3\). Proxyphylline inhibits cAMP and cGMP hydrolysis in human lung tissue. The apparent inhibition constant of proxyphylline is 0.06-0.7 mM at low cAMP concentrations and it is 1.0 mM at high cAMP concentrations\(^3\).
