BIOLOGICAL ACTIVITY

Description $Spermidine-d_{6} is the deuterium \ labeled \ Spermidine \ [1]. \ Spermidine \ maintains \ cell \ membrane \ stability, increases \ antioxidant$

enzymes activities, improving photosystem II (PSII), and relevant gene expression. Spermidine significantly decreases the

H2O2 and O2.- contents[2].

In Vitro Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as

tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to

affect the pharmacokinetic and metabolic profiles of drugs[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
