Inhibitors

## Chlorocholine chloride

Cat. No.:HY-B1886CAS No.:999-81-5Molecular Formula: $C_5H_{13}Cl_2N$ Molecular Weight:158.07Target:Others

**Storage:** Please store the product under the recommended conditions in the Certificate of

Analysis.

Others

## **BIOLOGICAL ACTIVITY**

Pathway:

Description	Chlorocholine chloride is an effective plant growth regulator. Chlorocholine chloride can inhibit gibberellin (GA) biosynthesis. Chlorocholine chloride can be used for the research of the mechanisms and effects of GA on plant cell growth and differentiation <sup>[1][2]</sup> .
In Vivo	CCCM300 mg/LMincreases the biomass of leaves and stems, substantially enhances the sucrose contents in leaves and decreases gibberellic acid (GA) but increases indole-3-acetic acid (IAA) contents in lily bulbs <sup>[2]</sup> .  MCE has not independently confirmed the accuracy of these methods. They are for reference only.
