Mequitazine

Cat. No.: HY-B2168
CAS No.: 29216-28-2
Molecular Formula: C₂₀H₂₂N₂S
Molecular Weight: 322.47
Target: Histamine Receptor
Pathway: GPCR/G Protein; Immunology/Inflammation
Storage:
- Powder: -20°C 3 years
- 4°C: 2 years
- In solvent: -80°C 6 months
- -20°C: 1 month

SOLVENT & SOLUBILITY

In Vitro DMSO: 16 mg/mL (49.62 mM; Need ultrasonic and warming)

BIOLOGICAL ACTIVITY

Description: Mequitazine is a potent, nonsedative and long-acting histamine H₁ antagonist.

In Vitro: Mequitazine is a potent H₁-receptors selective antihistaminic drug widely studied and used for allergic disorders such as hay fever and urticaria[1]. Mequitazine demonstrates significant bactericidal effects against all the tested clinical isolates including Ps. aeruginosa. Its effect against the Gram-positive isolates is more pronounced[2].

In Vivo: Mequitazine and clemizole antagonize the effect of histamine in guinea-pig ileum competitively. Mequitazine at 10⁷ produces a parallel shift of the dose-response curve to acetylcholine in the rat duodenum. Mequitazine at highest concentration shows anticholinergic activity[3]. Mequitazine inhibits contractile responses to KCl, phenylephrine (PE), 5-hydroxytryptamine (5-HT), and Ca²⁺ in rat aorta[4].
