

## Fluorescein-12-dATP

Cat. No.:	HY-D1721
Molecular Formula:	C <sub>41</sub> H <sub>41</sub> N <sub>6</sub> O <sub>19</sub> P <sub>3</sub>
Molecular Weight:	1014.71
Target:	Fluorescent Dye
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

#### Description

Fluorescein-12-dATP is a fluorescent dye acting as the detection probe. Fluorescein-12-dATP can be used to label the thrombin-binding aptamers by catalytic polymerization of TdT (terminal deoxynucleotidyl transferase)<sup>[1]</sup>. Fluorescein-12-dATP is a click chemistry reagent, it contains an Alkyne group and can undergo copper-catalyzed azide-alkyne cycloaddition (CuAAC) with molecules containing Azide groups.
