Geniposidic acid

**Cat. No.:** HY-N0010  
**CAS No.:** 27741-01-1  
**Molecular Formula:** C₁₆H₂₂O₁₀  
**Molecular Weight:** 374.34

**Target:** Others  
**Pathway:** Others  
**Storage:** Powder -20°C 3 years  
4°C 2 years  
In solvent -80°C 6 months  
-20°C 1 month

### BIOLOGICAL ACTIVITY

**Description**  
Geniposidic acid is an effective anticancer and radioprotection agent. Target: Others  
Mice were given an intraperitoneal injection of Geniposidic acid (GA) (12.5, 25, 50 mg/kg) 1 h before receiving GA against d-galactosamine (GalN) (800 mg/kg)/LPS (40 μg/kg). Liver and blood samples were collected 1 and 8 h after GalN/LPS injection. The survival rate of the GA group was significantly higher than the control. GalN/LPS increased serum aminotransferase activity, serum tumor necrosis factor-α level and hepatic lipid peroxidation and decreased hepatic glutathione content [1]. GA enhanced significantly the postirradiation responses of splenic blastogenesis by PHA. In addition, GA is a potent tumor growth inhibitor when combined with the X-irradiation, though there was no significant synergetic effect on their combined antitumor activity. The preliminary results of GA on hematological and blastogenic observations in this study suggested that it may very well, partially, play a role in an effective anticancer product with the ability to decrease undesirable radiation damage to the hematologic tissue after high dose irradiation [2].
