BIOLOGICAL ACTIVITY

Description

Thiocolchicoside is a competitive γ-aminobutyric acid type A (GABA_A) receptor antagonist and glycine receptor agonist in the central nervous system. Thiocolchicoside is a semisynthetic sulfur derivative of colchicoside. Thiocolchicoside is a muscle relaxant and has anti-inflammatory, and analgesic properties^[1].

IC₅₀ & Target

GABA_A receptor; glycine receptor^[1]

In Vitro

Thiocolchicoside (0.001, 0.1, 1, 10, 100 μM) reduces the amplitude of eIPSCs in a concentration-dependent manner with this effect being significant at 0.1 μM and maximal at 10 μM^[1].
 MCE has not independently confirmed the accuracy of these methods. They are for reference only.
