

## Data Sheet

<b>Product Name:</b>	Licochalcone A
<b>Cat. No.:</b>	HY-N0372
<b>CAS No.:</b>	58749-22-7
<b>Molecular Formula:</b>	C <sub>21</sub> H <sub>22</sub> O <sub>4</sub>
<b>Molecular Weight:</b>	338.40
<b>Target:</b>	Autophagy
<b>Pathway:</b>	Autophagy
<b>Solubility:</b>	DMSO: ≥ 31 mg/mL

### BIOLOGICAL ACTIVITY:

Licochalcone A, a flavonoid isolated from the famous Chinese medicinal herb *Glycyrrhiza uralensis* Fisch, presents obvious anti-cancer effects. The IC<sub>50</sub> value is 0.97 μM for UGT1A1.

### PROTOCOL (Extracted from published papers and Only for reference)

Kinase Assay [1] Caspase 3/7 activity assay kits (Cell Signaling Technology, Inc., Beverly, MA, USA) were utilized to study caspase activities in accordance with the manufacturer's instructions. Cells were plated into 96-well plates and cultured for 24 h. Cells were incubated with indicated concentrations of LCA with or without pretreatment of CQ (5 μM, 1 h) or specific knock-down of ATG7. Cells were then lysed on ice for 5 min and caspase 3/7 assay reagent (200 μL) was added into each well and incubated for 1 h. Luminescence was detected using a microplate reader (Perkin Elmer, 1420 Multilabel Counter Victor3, Wellesley, MA, USA). Cell Assay [1] The effects of LCA on cell viability were examined by MTT assay as described in the previous report<sup>35</sup>. Briefly, exponentially growing cells were seeded into 96-well plates. Upon reaching approximately 70% to 80% confluence, cells were treated as indicated. Then, the cell viability was detected by incubating the cells in a medium containing 1 mg/mL MTT for 4 h. 100 μL of DMSO was then added into solubilize the formazan and shaking for 10 min in the dark. The absorbance at 570 nm was recorded with a microplate reader (Perkin Elmer, 1420 Multilabel Counter Victor3, Wellesley, MA, USA).
