L-Glutamine-¹⁵N₂,d₅

Cat. No.:	HY-N0390S7
Molecular Formula:	$C_{5}H_{5}D_{5}^{15}N_{2}O_{3}$
Molecular Weight:	^{153.16} O D O
Target:	mGluR; Ferroptosis; Endogenous Metabolite; Isotope-Labeled Compounds
Pathway:	GPCR/G Protein; Neuronal Signaling; Apoptosis; Metabolic Enzyme/Protease; Others $H_2^{15}N \longrightarrow OH$
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

Inhibitors

BIOLOGICAL ACTIVI	
Description	L-Glutamine- ¹⁵ N ₂ ,d ₅ is the deuterium and ¹⁵ N-labeled L-Glutamine. L-Glutamine (L-Glutamic acid 5-amide) is a non- essential amino acid present abundantly throughout the body and involved in many metabolic processes. L-Glutamine provides a source of carbons for oxidation in some cells[1][2].
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
