Madecassoside

Cat. No.: HY-N0568
CAS No.: 34540-22-2
Molecular Formula: C₄₈H₇₈O₂₀
Molecular Weight: 975.12
Target: Apoptosis; Endogenous Metabolite
Pathway: Apoptosis; Metabolic Enzyme/Protease
Storage: Powder
-20°C 3 years
4°C 2 years
In solvent
-80°C 6 months
-20°C 1 month

SOLVENT & SOLUBILITY

In Vitro DMSO : ≥ 9.8 mg/mL (10.05 mM)
* “≥” means soluble, but saturation unknown.

BIOLOGICAL ACTIVITY

Description
Madecassoside is a pentacyclic triterpene isolated from Centella asiatica (L.), as an anti-inflammatory, anti-oxidative activities and anti-aging agent. [1] In vitro: Madecassoside exhibit significant anti-proliferative and anti-invasive effect in HGF-induced HepG2 and SMMC-77 cells. Madecassoside inhibit the HGF-induced activation of cMET-PKC-ERK1/2-COX-2-PGE2 cascade. [1] In vivo: Administration of madecassoside, p.o., exhibit a direct anti-PF effect in mice. Madecassoside increase the expression of hepatocyte growth factor (HGF) in colon tissues, and HGF receptor antagonists attenuated its anti-PF effect. madecassoside in mice are not mediated by its metabolites or itself after absorption into blood. Instead, madecassoside increases the activity of PPAR-γ, which subsequently increases HGF expression in colonic epithelial cells. [2] The reference for administration is 12 mg/kg. [3]
