

Thymidine-¹³C-1

Cat. No.:	HY-N1150S3
CAS No.:	240407-53-8
Molecular Formula:	C ₉ ¹³ CH ₁₄ N ₂ O ₅
Molecular Weight:	243.22
Target:	DNA/RNA Synthesis; Endogenous Metabolite; Orthopoxvirus; Isotope-Labeled Compounds
Pathway:	Cell Cycle/DNA Damage; Metabolic Enzyme/Protease; Anti-infection; Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Thymidine- ¹³ C-1 is the ¹³ C labeled Thymidine. Thymidine, a specific precursor of deoxyribonucleic acid, is used as a cell synchronizing agent. Thymidine is a DNA synthesis inhibitor that can arrest cell at G1/S boundary, prior to DNA replication[1]
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
