BIOLOGICAL ACTIVITY		
Description	Methyl palmitate- ¹³ C ₁₆ is the ¹³ C labeled Methyl palmitate. Methyl palmitate, an acaricidal compound occurring in green walnut husks, inhibits phagocytic activity and immune response. Methyl palmitate also posseses anti-inflammatory and antifibrotic effects[1][2][3].	
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
