

Tenuifoliside A

| | |
|--------------------|---|
| Cat. No.: | HY-N6076 |
| CAS No.: | 139726-35-5 |
| Molecular Formula: | C ₃₁ H ₃₈ O ₁₇ |
| Molecular Weight: | 682.62 |
| Target: | ERK |
| Pathway: | MAPK/ERK Pathway; Stem Cell/Wnt |
| Storage: | Please store the product under the recommended conditions in the COA. |

BIOLOGICAL ACTIVITY

Description

Tenuifoliside A is isolated from *Polygala tenuifolia*, has anti-apoptotic and antidepressant-like effects. Tenuifoliside A exhibits its neurotrophic effects and promotes cell proliferation through the **ERK/CREB/BDNF** signal pathway in C6 cells^[1].

In Vitro

Tenuifoliside A (6-30 μM; 24 hours) increases the C6 cells viability significantly by concentration dependent manner. But the viability of the 60 μM treatment group is suppressed. Only 60 μM TFSA induced the release of LDH, shows a toxic effect^[1].
 Tenuifoliside A (10 μM; 2, 5, 7, 10, 15, 30, 45 and 60 mins) elicits a rapid (starting at 2 min) and marked induction of ERK1/2 phosphorylation peaking at 5 min. And, the enhanced levels of phospho-ERK induced by TFSA are partially blocked by ERK inhibitor U0126^[1].
