Product Data Sheet

BIOLOGICAL ACTIVITY		
Description	Benzyl acetate-d ₅ is the deuterium labeled Benzyl acetate[1]. Benzyl acetate is a constituent of jasmin and of the essential oils of ylang-ylang and neroli. Natural sources of Benzyl acetate include varieties of flowers like jasmine (Jasminum), and fruits like pear, apple[2].	
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
