

## SN50

<b>Cat. No.:</b>	HY-P0151		
<b>CAS No.:</b>	213546-53-3		
<b>Molecular Formula:</b>	C <sub>129</sub> H <sub>230</sub> N <sub>36</sub> O <sub>29</sub> S		
<b>Molecular Weight:</b>	2781.5	AAVALLPAVLLALLAPVQRKRQKLMP	
<b>Sequence:</b>	Ala-Ala-Val-Ala-Leu-Leu-Pro-Ala-Val-Leu-Leu-Ala-Leu-Leu-Ala-Pro-Val-Gln-Arg-Lys-Arg -Gln-Lys-Leu-Met-Pro		
<b>Sequence Shortening:</b>	AAVALLPAVLLALLAPVQRKRQKLMP		
<b>Target:</b>	NF-κB		
<b>Pathway:</b>	NF-κB		
<b>Storage:</b>	Powder	-80°C	2 years
		-20°C	1 year
	In solvent	-80°C	6 months
		-20°C	1 month

### SOLVENT & SOLUBILITY

#### In Vitro

H<sub>2</sub>O : 50 mg/mL (17.98 mM; Need ultrasonic)

Concentration	Mass		
	1 mg	5 mg	10 mg
1 mM	0.3595 mL	1.7976 mL	3.5952 mL
5 mM	0.0719 mL	0.3595 mL	0.7190 mL
10 mM	0.0360 mL	0.1798 mL	0.3595 mL

Please refer to the solubility information to select the appropriate solvent.

### BIOLOGICAL ACTIVITY

**Description** SN50 is a cell permeable inhibitor of NF-κB translocation.

**IC<sub>50</sub> & Target** NF-κB

#### In Vitro

Pretreatment with SN50 results in a significant reduction in amount of PI-positive cells at 12, 24, and 48 h time-point post TBI compared with vehicle-treated groups<sup>[1]</sup>. Topical SN50 suppresses nuclear factor-κB activation in local cells and reduces the incidence of epithelial defects/ulceration in healing corneas. Myofibroblast generation, macrophage invasion, activity of matrix metalloproteinases, basement membrane destruction, and expression of cytokines are all decreased in treated corneas compared with controls<sup>[2]</sup>. Treating the human gastric cancer cells SGC7901 with SN50 could significantly enhance the effects of LY294002 on inducing cell death after 24 h<sup>[3]</sup>. SN50 can inhibit translocation of NF-κB and production of inflammatory cytokines that are implicated in lipopolysaccharide (LPS)-induced lung injury<sup>[4]</sup>. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

## In Vivo

Treatment with SN50 accelerates the recovery of motor functional outcome from 1st to 4th day. Animals subjected to SN50 pretreatment demonstrate a significant decrease in the visuospatial learning latencies relative to the control group at 7 and 8 days post-TBI. Pretreatment with SN50 results in a significant reduction of NF- $\kappa$ B p65 protein levels from 6 to 48 h post-TBI and TNF- $\alpha$  protein levels from 12 to 48 h post-TBI<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

## PROTOCOL

### Cell Assay <sup>[3]</sup>

SN50 is diluted in distilled sterilization water to create a stock solution. The final concentration of the SN50 solution used is 18  $\mu$ M. Cell viability is assessed with MTT assay. To determine the effects of SN50 on enhancing the role of LY294002 on SGC7901 cells, cells are plated into 96-well microplates (7 $\times$ 1000 cells/well) and cultured for 24 h. Then LY294002 (50  $\mu$ M), SN50 (18  $\mu$ M) and LY294002+SN50 are added to the culture medium and cell viability is assessed with MTT 24 h after drug treatment<sup>[3]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

### Animal Administration <sup>[1]</sup>

Mice: SN50 is prepared in saline (total volume: 1  $\mu$ L, concentration: 0.1  $\mu$ g/ $\mu$ L). SN50 is administered into the ipsilateral cerebral ventricle 10 min before TBI. After TBI, the bone flap is replaced, the scalp incision is sutured, and then mice are allowed to awaken and returned to their cages. Mice are killed at 1, 6, 12, 24, 48, and 72 h after operation. Loss of plasmalemma integrity is evaluated by intraperitoneal injection of PI 1 h before killing the animal<sup>[1]</sup>.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
