

α-MSH TFA

Cat. No.:	HY-P0252A
CAS No.:	171869-93-5
Molecular Formula:	$C_{77}H_{109}N_{21}O_{19}S.xC_2HF_3O_2$
Sequence:	Ac-Ser-Tyr-Ser-Met-Glu-His-Phe-Arg-Trp-Gly-Lys-Pro-Val-NH ₂
Sequence Shortening:	Ac-SYSMEHFRWGKPV-NH ₂
Target:	Melanocortin Receptor
Pathway:	GPCR/G Protein; Neuronal Signaling
Storage:	Sealed storage, away from moisture and light, under nitrogen

Powder -80°C 2 years
 -20°C 1 year

* In solvent : -80°C, 6 months; -20°C, 1 month (sealed storage, away from moisture and light, under nitrogen)

SOLVENT & SOLUBILITY

In Vitro	H ₂ O : 25 mg/mL (Need ultrasonic)
----------	---

BIOLOGICAL ACTIVITY

Description	α-MSH (α-Melanocyte-Stimulating Hormone) TFA, an endogenous neuropeptide, is an endogenous melanocortin receptor 4 (MC4R) agonist with anti-inflammatory and antipyretic activities. α-MSH TFA is a post-translational derivative of pro-opiomelanocortin (POMC) ^{[1][2]} .
IC ₅₀ & Target	MC4R
In Vitro	α-MSH TFA modulates CNS inflammation by acting directly on melanocortin receptors in glial cells. α-MSH TFA modulates NFκB activation. α-MSH TFA inhibits translocation of transcription factor κB to the nucleus ^[3] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
In Vivo	α-MSH TFA (50 μg/0.2 ml saline; i.p.) given systemically effectively modulates inflammatory reactions ^[3] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
