BIOLOGICAL ACTIVITY

Description

Carcinoembryonic antigen peptide 1 (CAP1) is a tumor marker in lung cancer.

In Vitro

Carcinoembryonic Antigen (CEA) as tumor marker in lung cancer. The use of CEA as a prognostic and predictive marker. CEA is a glycoprotein involved in cell adhesion, and is normally produced during fetal development but the production stops before birth. CEA is a glycosyl phosphatidyl inositol (GPI)-cell surface anchored glycoprotein whose specialized sialofucosylated glycoforms serve as functional colon carcinoma L-selectin and E-selectin ligands, which may be critical to the metastatic dissemination of colon carcinoma cells^[1].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.
