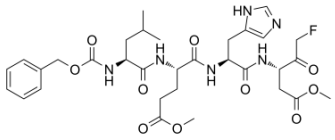
Z-LEHD-FMK

Cat. No.:	HY-P1010
CAS No.:	210345-04-3
Molecular Formula:	$C_{32}H_{43}FN_6O_{10}$
Molecular Weight:	690.72
Target:	Caspase; Apoptosis
Pathway:	Apoptosis
Storage:	Powder -80°C 2 years -20°C 1 year In solvent -80°C 6 months -20°C 1 month



BIOLOGICAL ACTIVITY

Description	Z-LEHD-FMK is a selective and irreversible inhibitor of caspase-9, protects against lethal reperfusion injury and attenuates apoptosis. Z-LEHD-FMK exhibits the neuroprotective effect in a rat model of spinal cord trauma[1][2][3].
IC_{50} & Target	Caspase-9
In Vitro	Z-LEHD-FMK (20 μM; pretreated for 30 min) completely protects HCT116 and 293 cells from TRAIL-induced toxicity[1]. Z-LEHD-FMK (20 μM ; 6 h) protects normal human hepatocytes from TRAIL-induced apoptosis[1]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Apoptosis Analysis[1]

Cell Line:	SW480, H460, HCT116 and 293 cells
Concentration:	20 μM
Incubation Time:	Pretreated for 30 min
Result:	Protected HCT116 and 293 cells from TRAIL-induced apoptosis.

Western Blot Analysis[1]

Cell Line:	HCT116, SW480 cells
Concentration:	20 μM
Incubation Time:	2 h
Result:	Protected procaspase 3 from cleavage in HCT116 cells but not in SW480 cells, especially at the 16-h time point.

In Vivo	Z-LEHD-FMK (0.8 μmol/kg; i.v. for 7 d) protects neurons, glia, myelin, axons, and intracellular organelles in spinal cord injury (SCI) rats[2]. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Male Wistar albino rats (250-350 g) with SCI[2]
Dosage:	0.8 μmol/kg
Administration:	I.v. for 1 or 7 days
Result:	Decreased the mean apoptotic cell count at 24 hours and 7 days postinjury.
