Product Data Sheet

M-CSF Protein, Human (Biotinylated, HEK293, C-His-Avi)

Cat. No.: HY-P700788

Synonyms: CSF1; CSF-1; MCSF; M-CSF; MGC31930; Lanimostim

Species: Human
Source: HEK293

Accession: P09603-1 (E33-N190)

Gene ID: 1435

Molecular Weight: 27-37 kDa

PROPERTIES

Biological Activity	Immobilized Human M-CSF R, hFc Tag at $5\mu g/ml$ ($100\mu l/well$) on the plate. Dose response curve for Biotinylated Human M-CSF, His Tag with the EC $_{50}$ of $19.4 ng/ml$ determined by ELISA.
Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.22 μm filtered solution of PBS, pH 7.4. Normally 8% trehalose is added as protectant before lyophilization.
Endotoxin Level	<1 EU/μg, determined by LAL method.
Reconsititution	It is not recommended to reconstitute to a concentration less than 100 $\mu g/mL$ in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background

M-CSF Protein is a vital cytokine involved in regulating the survival, proliferation, and differentiation of hematopoietic precursor cells, particularly mononuclear phagocytes like macrophages and monocytes. It plays a crucial role in innate immunity and inflammatory processes by promoting the release of pro-inflammatory chemokines. Additionally, M-CSF Protein is essential for osteoclast proliferation and differentiation, regulating bone resorption, and normal bone development. It is also necessary for normal male and female fertility. Moreover, M-CSF Protein contributes to the reorganization of the actin cytoskeleton, facilitating membrane ruffle formation, cell adhesion, and cell migration. Furthermore, it plays a role in lipoprotein clearance. M-CSF Protein can exist in different forms, such as homodimer or heterodimer configurations, and it interacts with CSF1R.
