Product Data Sheet

CA125 Protein, Human (685a.a, HEK293, His)

Cat. No.: HY-P700961

Synonyms: CA125; CA-125; CA125MUC-16; FLJ14303; MUC16

Species: Human HEK293 Source:

Accession: Q8WXI7 (D12783-S13467)

Gene ID: 94025

Molecular Weight: 90-140 kDa

| Biological Activity | Immobilized Human CA125, His Tag at $1\mu g/ml$ ($100\mu l/well$) on the plate. Dose response curve for Human MSLN, hFc Tag with the EC $_{50}$ of 27.4ng/ml determined by ELISA. |
|---------------------|--|
| Appearance | Solution. |
| Formulation | Supplied as a 0.22μm filtered solution of PBS, pH 7.4. |
| Endotoxin Level | <1 EU/µg, determined by LAL method. |
| Reconsititution | N/A. |
| Storage & Stability | Stored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for extended storage. Avoid repeated freeze-thaw cycles. |
| Shipping | Shipping with dry ice. |

DESCRIPTION

Background

CA125 protein is believed to serve a crucial role in establishing a protective and lubricating barrier against particles and infectious agents at mucosal surfaces. It exerts its functions through binding to MSLN, where the interaction mediates heterotypic cell adhesion. This adhesive property may play a significant role in the metastasis of ovarian cancer to the peritoneum, as CA125 initiates cell attachment to the mesothelial epithelium by binding to MSLN. The interaction between CA125 and MSLN underscores its potential involvement in the adhesive events associated with cancer metastasis, particularly in the context of ovarian cancer progression to the peritoneal cavity.

Caution: Product has not been fully validated for medical applications. For research use only.
