

FITC-Labeled CD37 Protein, Human (HEK293, Fc)

Cat. No.:	HY-P701276
Synonyms:	CD37; Tspan-26; TSPAN26
Species:	Human
Source:	HEK293
Accession:	P11049 (R112-N241)
Gene ID:	951
Molecular Weight:	50-60 kDa

PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from 0.22 µm filtered solution of PBS, pH7.4. Normally trehalose is added as protectant before lyophilization.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 1 year, protect from light. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	CD37 protein is known to interact with SCIMP, indicating a functional association between these two molecules. CD37 is a transmembrane protein that belongs to the tetraspanin family and is primarily expressed on the surface of B cells and other immune cells. It plays a role in various cellular processes, including signal transduction, adhesion, and immune modulation. The interaction with SCIMP suggests a potential involvement of CD37 in immune signaling pathways or protein complex formation, but further investigation is necessary to fully elucidate the functional significance of this interaction.
