

TRIM3 Protein, Human (GST)

Cat. No.:	HY-P701504
Synonyms:	TRIM3; Tripartite motif-containing protein 3; Brain-expressed RING finger protein; RING finger protein 22; RING finger protein 97
Species:	Human
Source:	E. coli
Accession:	O75382 (A2-Q744)
Gene ID:	10612
Molecular Weight:	

PROPERTIES

Appearance	Solution.
Formulation	Supplied as a 0.22 µm filtered solution of 50 mM Tris-HCl, pH7.5, 200 mM NaCl, 20% glycerol.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	Please use rapid thawing with running water to thaw the protein.
Storage & Stability	Stored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for extended storage. Avoid repeated freeze-thaw cycles.
Shipping	Shipping with dry ice.

DESCRIPTION

Background	<p>TRIM3, an E3 ubiquitin ligase, assumes crucial roles in neuronal functions, orchestrating the regulation of neuronal plasticity, learning, and memory. Beyond its neuronal involvement, TRIM3 extends its influence to various biological processes, including innate immunity and cell cycle regulation. Within neurons, it becomes a key component of the cytoskeleton-associated recycling or transport complex, exerting its regulatory role by polyubiquitinating gamma-actin and thereby influencing neuronal plasticity. Additionally, TRIM3 ubiquitinates the postsynaptic scaffold GKAP, contributing to synaptic remodeling and modulation of dendritic spine morphology. It positively regulates the motility of the microtubule-dependent motor protein KIF21B. Moreover, TRIM3, through its RING-dependent E3 ligase activity, induces growth arrest and ubiquitinates CDKN1A. In the realm of innate immunity, it plays a positive regulatory role in TLR3-mediated signaling by mediating 'Lys-63'-linked polyubiquitination of TLR3, subsequently facilitating the recognition and sorting of polyubiquitinated TLR3 by the ESCRT complexes.</p>
