

BACH2 Protein, Human (Sf9)

Cat. No.:	HY-P701533
Synonyms:	BACH2; Transcription regulator protein BACH2; BTB and CNC homolog 2
Species:	Human
Source:	Sf9 insect cells
Accession:	Q9BYV9 (S2-T841)
Gene ID:	60468
Molecular Weight:	

PROPERTIES

Appearance	Solution.
Formulation	Supplied as a 0.22 µm filtered solution of 50 mM Tris-HCl, pH7.5, 200 mM NaCl, 20% glycerol.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	Please use rapid thawing with running water to thaw the protein.
Storage & Stability	Stored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for extended storage. Avoid repeated freeze-thaw cycles.
Shipping	Shipping with dry ice.

DESCRIPTION

Background	BACH2, a versatile transcriptional regulator, exhibits dual roles as a repressor and activator. Recognizing Maf recognition elements (MARE), it coordinates transcriptional activation and repression in conjunction with MAFK. In response to oxidative stress, BACH2 induces apoptosis by repressing the antiapoptotic factor HMOX1. Moreover, it plays a pivotal role in adaptive immunity, critically contributing to the maintenance of regulatory T-cell function and B-cell maturation. BACH2 forms homodimers, disulfide-linked, and heterodimers with Maf-related transcription factors, emphasizing its involvement in complex regulatory networks. Additionally, BACH2 serves as a positive regulator of the nuclear import of actin, underscoring its diverse functions in cellular processes.
