

Product Data Sheet

KBTBD2 Protein, Human (Sf9, His, Strep)

Cat. No.:	HY-P701576
Synonyms:	KBTBD2; Kelch repeat and BTB domain-containing protein 2; BTB and kelch domain-containing protein 1
Species:	Human
Source:	Sf9 insect cells
Accession:	Q8IY47 (S2-V623)
Gene ID:	25948
Molecular Weight:	

ProferenceSolution.FormulationSupplied as a 0.22 µm filtered solution of 50 mM Tris-HCl, pH7.5, 200 mM NaCl, 20% glycerol.Endotoxin Level<1 EU/µg, determined by LAL method.

FormulationSupplied as a 0.22 µm filtered solution of 50 mM Tris-HCl, pH7.5, 200 mM NaCl, 20% glycerol.Findotoxin Level<	Appearance	Solution.
Endotoxin Level<1 EU/µg, determined by LAL method.ReconsititutionPlease use rapid thawing with running water to thaw the protein.Storage & StabilityStored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for 1ShippingShipping with dry ice.	Formulation	Supplied as a 0.22 μm filtered solution of 50 mM Tris-HCl, pH7.5, 200 mM NaCl, 20% glycerol.
ReconsititutionPlease use rapid thawing with running water to thaw the protein.Storage & StabilityStored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C forShippingShipping with dry ice.	Endotoxin Level	<1 EU/ μ g, determined by LAL method.
Storage & StabilityStored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for extended storage. Avoid repeated freeze-thaw cycles.ShippingShipping with dry ice.	Reconsititution	Please use rapid thawing with running water to thaw the protein.
Shipping Shipping with dry ice.	Storage & Stability	Stored at -80°C for 1 year. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for extended storage. Avoid repeated freeze-thaw cycles.
	Shipping	Shipping with dry ice.

DESCRIPTION	
Background	KBTBD2, functioning as a substrate-specific adapter within the BCR (BTB-CUL3-RBX1) E3 ubiquitin ligase complex, emerges as a key regulator in the insulin signaling pathway with a pronounced impact on insulin sensitivity in adipocytes. This regulatory role is executed through the modulation of PIK3R1/p85alpha abundance, the regulatory subunit of phosphatidylinositol 3-kinase (PI3K). Notably, KBTBD2 orchestrates the ubiquitination process targeting PIK3R1 for 'Lys-48'- linked polyubiquitination, leading to its subsequent proteasome-mediated degradation. The intricate protein modification mechanism orchestrated by KBTBD2, specifically its role in protein ubiquitination, underscores its pivotal function in fine- tuning the insulin signaling cascade and, by extension, insulin sensitivity within adipocytes.

Caution: Product has not been fully validated for medical applications. For research use only.
