

Tau-D/0N4R Protein, Human (133a.a, His)

Cat. No.:	HY-P71102
Synonyms:	Microtubule-Associated Protein Tau; Neurofibrillary Tangle Protein; Paired Helical Filament-Tau; PHF-Tau; MAPT; MAPTL; MTBT1; TAU
Species:	Human
Source:	E. coli
Accession:	P10636-6 (Q249-Q381)
Gene ID:	4137
Molecular Weight:	Approximately 16.0 kDa

PROPERTIES

AA Sequence	<p> Q I V Y K P V D L S K V T S K C G S L G N I H H K P G G G Q V E V K S E K L D F K D R V Q S K I G S L D N I T H V P G G G N K K I E T H K L T F R E N A K A K T D H G A E I V Y K S P V V S G D T S P R H L S N V S S T G S I D M V D S P Q L A T L A D E V S A S L A K Q </p>
Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 µm filtered solution of PBS, 1 mM PMSF, pH 7.4.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH ₂ O. For long term storage it is recommended to add a carrier protein (0.1% BSA, 5% HSA, 10% FBS or 5% Trehalose).
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	<p>Microtubule-associated protein tau is a microtubule-associated protein that is found in large quantities in neurons of the central nervous system (CNS). MAPT promotes microtubule assembly and stability and may be involved in the establishment and maintenance of neuronal polarity. MAPT can bind axon microtubules at the C end and neurotic membrane components at the N end, acting as a connexion between the two. Defects in MAPT can lead to neurological diseases such as Alzheimer's and Parkinson's. Overexpression of MAPT is associated with a poor prognosis of prostate cancer. Tau protein S262/S356 can be phosphorylated by AMPK-related kinase^{[1][2][3][4]}.</p>
