

## Neurturin Protein, Human

Cat. No.:	HY-P71155
Synonyms:	Neurturin; NRTN
Species:	Human
Source:	E. coli
Accession:	Q99748 (A96-V197)
Gene ID:	4902
Molecular Weight:	Approximately 15.0 kDa

### PROPERTIES

AA Sequence	A R L G A R P C G L    R E L E V R V S E L    G L G Y A S D E T V    L F R Y C A G A C E A A A R V Y D L G L    R R L R Q R R L R    R E R V R A Q P C C    R P T A Y E D E V S F L D A H S R Y H T    V H E L S A R E C A    C V
Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 µm filtered solution of 10 mM sodium citrate, pH 4.0.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH <sub>2</sub> O. For long term storage it is recommended to add a carrier protein (0.1% BSA, 5% HSA, 10% FBS or 5% Trehalose).
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

### DESCRIPTION

Background	<p>Neurturin protein, a vital factor in neurobiology, plays a key role in supporting the survival of sympathetic neurons in culture. Beyond its role in neuronal survival, Neurturin is suggested to have regulatory functions in the development and maintenance of the central nervous system (CNS), influencing the intricate processes governing neural growth and stability. Additionally, there is a potential involvement in modulating the size of non-neuronal cell populations, such as haemopoietic cells, underscoring its broader impact on cellular dynamics. Neurturin functions as a homodimer, held together by disulfide linkages, emphasizing its structural integrity in executing its diverse cellular functions.</p>
