

## OX40/TNFRSF4 Protein, Human (Biotinylated, HEK293, Fc-Avi)

Cat. No.:	HY-P72404
Synonyms:	ACT35 antigen; TAX transcriptionally-activated glycoprotein 1 receptor; CD134; TNFRSF4; TXGP1L
Species:	Human
Source:	HEK293
Accession:	P43489 (L29-A216)
Gene ID:	7293
Molecular Weight:	60-85 kDa

### PROPERTIES

AA Sequence	<p>L H C V G D T Y P S      N D R C C H E C R P      G N G M V S R C S R      S Q N T V C R P C G</p> <p>P G F Y N D V V S S      K P C K P C T W C N      L R S G S E R K Q L      C T A T Q D T V C R</p> <p>C R A G T Q P L D S      Y K P G V D C A P C      P P G H F S P G D N      Q A C K P W T N C T</p> <p>L A G K H T L Q P A      S N S S D A I C E D      R D P P A T Q P Q E      T Q G P P A R P I T</p> <p>V Q P T E A W P R T      S Q G P S T R P V E      V P G G R A V A</p>
Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 µm filtered solution of PBS, pH7.4.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH <sub>2</sub> O. For long term storage it is recommended to add a carrier protein (0.1% BSA, 5% HSA, 10% FBS or 5% Trehalose).
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

### DESCRIPTION

Background	<p>OX40 (TNFRSF4), a member of TNFR superfamily, is a receptor for OX40 Ligand. OX40 is preferentially expressed by T cells, but also found in natural killer T cells, natural killer cells, neutrophils, and human airway smooth muscle cells. Human OX40 shares &lt;30% aa sequence identity with mouse and rat. Mouse OX40 shares 90% aa sequence identity with rat<sup>[1]</sup>.</p> <p>OX40 Ligand can activate OX40 and thereby functioning as a T cell co-stimulatory molecule. The OX40-OX40 Ligand interaction promotes effector T-cell survival and effectively induces memory T-cell generation, as well as enhances the helper function of Tfh for B cells, and also promotes the differentiation and maturation of DCs<sup>[1][2]</sup>.</p> <p>The interaction between OX40 Ligand with OX40 is essential for the generation of antigen-specific memory T cells, and</p>

---

induces host antitumor immunity<sup>[3]</sup>. But the over-upregulation of OX40 and OX40L may induce abnormal activation of Tfh cells and excessive production of autoantibodies, which leads to autoimmune disease<sup>[1]</sup>.
