## DESCRIPTION

## Background

ICAM-2/CD102 protein emerges as a significant participant in cellular interactions, functioning as a ligand for the leukocyte adhesion protein LFA-1 (integrin alpha-L/beta-2). Notably, ICAM-2 may contribute to lymphocyte recirculation by inhibiting LFA-1-dependent cell adhesion. Its involvement extends to mediating adhesive interactions crucial for various immune processes, including antigen-specific immune responses, NK-cell mediated clearance, lymphocyte recirculation, and other cellular interactions vital for immune response and surveillance. The protein further interacts with RDX, EZR, and MSN, emphasizing its intricate associations in the cellular machinery that underlies immune regulation and surveillance.
